RMD Weather Report 15 October 2025

SOUTH AFRICA

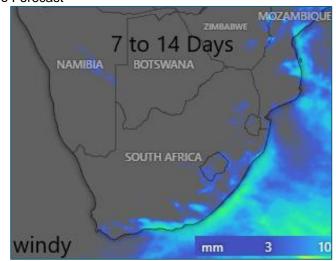

The Next Week's Forecast

WEEKEND RAINS

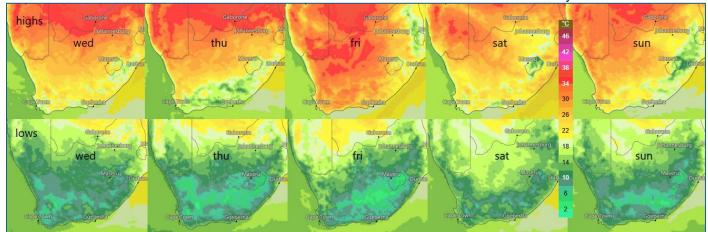

Rest of this week is expected mainly dry with weekend rain forecasted, image above.

The 7-to-14-day forecast is seen basically dry in the interior with some activities along the southern and western shores at this stage, image on the right.

Temperatures are expected to increase this week throughout the interior.

Accumulative 7-to-14-day Rain Forecast

5-Day High and Low Temperature Forecast

NORTH AMERICA

WESTERN MIDWEST GETTING WET. FRONT MOVING THROUGH THIS WEEKEND

A stalled front in the NW Midwest will bring shower chances through the week, shifting east this weekend with possible stronger thunderstorms. Showers may delay NW harvest, but most areas stay workable; weekend rain could briefly slow progress.

STALLED FRONT, SYSTEMS BRINGING RAIN TO CENTRAL AND SOUTHERN PLAINS

A stalled front keeps systems active, with consistent showers farther north slowing some harvest. Soil moisture favors winter wheat, though some spots need more rain.

NORTHERN PLAINS STAYING WET THIS WEEK

Scattered showers persist through Friday along a southern stalled front, hindering harvest progress. Cooler temps bring typical frosts/freezes.

MISSISSIPPI RIVER WATER LEVELS FALLING AGAIN

Dry Delta weather since mid-last week worsens drought, river levels dip despite recent Ohio Valley rain. This week's dryness hurts, but weekend showers may slightly ease the decline.

SOUTH AMERICA

WET SEASON SHOWERS ACTIVE IN CENTRAL BRAZIL

Scattered wet-season showers aid soybean planting/establishment, slowly rehydrating dry areas. Southern fronts from Argentina boost corn/soybean moisture.

DRIER IN ARGENTINA, BUT GOOD SOIL MOISTURE CONTINUES

Weekend front brought scattered showers, missing some spots, but high soil moisture supports crops. Late-week front targets north; La Niña may bring heat/dryness later, but conditions remain favourable for upcoming soybean planting.

OTHER

LIMITED SHOWERS FOR EUROPE THIS WEEK

Isolated showers in eastern Europe; drier NW raises minor winter wheat concerns, but weekend system forecast brings heavy rain into next week.

ISOLATED SHOWERS CONTINUE IN THE BLACK SEA

Weekend showers were light amid western Russia drought. This week: isolated showers, cooler temps with northern frosts; weekend system may deliver more scattered benefits.

LIMITED SHOWERS FOR AUSTRALIA

Eastern weekend showers helped, but recent dryness concerns winter wheat/canola in spots. Good moisture buffers most areas; limited showers this week, with dry zones expanding if systems falter.

RAIN MAY BE TOO HEAVY IN CENTRAL CHINA

Consistent central rains aid winter wheat/canola but risk flooding in spots. NE dryness favours corn/soybean harvest. Scattered showers continue this week, then cold air brings limited central frosts before winter ramps up.
